## Vocabulary

| Number |  <br> Subtraction | Multiplication <br> \& Division | Fractions | Measurement | Geometry | Statistics |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| numeral | sum | groups of | equivalent | gram/ <br> kilogram | surface | pictogram |
| digits | more/less | times | numerator | minute/hour | line of <br> symmetry | tally |
| ones/tens/ <br> hundreds | tens <br> boundary <br> number | repeated <br> addition | denominator | estimate | face | histogram |
| sequence | bultiple <br> bonds | sharing | contains | edge | graph |  |
| greater <br> than/less <br> than | add | array | thirds | digital clock | vertex | represent |
| place value | subtract | row/column | halves | analogue | clock | vertices |

## Order for learning the times tables

Step 1

Fire just $1 \times 6,2 \times 6,5 \times 6,10 \times 6$ at them first.
This will build up on their most secure existing table facts

Step 2
Add in $3 \times 6,4 \times 6$ when step 1 is frequently recalled correctly and instantly

Step 3
Build up with $6 \times 6,7 \times 6,8 \times 6$

Step 4
When looking at $9 \times 6,11 \times 6$ and $12 \times 6$, children should look at finding $10 \times 6$ and adjust

When they're ready, add in related division facts.

## CPA approach to：Addition

| Objective \＆ Strategy | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Adding multiples of ten | $50=30=20$ <br> Model using dienes and bead strings | $\begin{gathered} 3 \text { tens }+5 \text { tons }=\ldots \text { tens } \\ 30+50= \end{gathered}$ <br> Use representations for base ten． | $\begin{aligned} & 20+30=50 \\ & 70=50+20 \\ & 40+\square=60 \end{aligned}$ |
| Use known number facts <br> Part part whole | Children ex－ plore ways of making num－ bers within 20 | $\begin{gathered} \square+\square=20 \\ \square+\square=20 \\ \square+\square=\square \\ \square=\square \end{gathered}$ | $\begin{array}{ll} \square+1=16 & 16-1=\square \\ 1+\square=16 & 16-\square=1 \end{array}$ |
| Using known facts | $\begin{aligned} & \square_{\square} \square+\square_{\square} \square=\square_{\square} \square_{\square^{\square}} \\ & \square \square \square+\square \square \square \end{aligned}$ | Children draw representations of $\mathrm{H}, \mathrm{T}$ and O | $3+4=7$ <br> leads to $30+40=70$ <br> leads to $300+400=700$ |
| Bar model | $3+4=7$ | $7+3=10$ | 23 25 <br> $?$ $23+25=48$ |
| Add a two digit number and ones | $17+5=22$ <br> Use ten frame to make＇magic ten <br> Children explore the pattern． $\begin{aligned} & 17+5=22 \\ & 27+5=32 \end{aligned}$ |  | $17+5=22$ <br> Explore related facts $17+5=22$ <br> $5+17=22$ $22-17=5$ $22-5=17$ |
| Add a 2 digit num－ ber and tens | $25+10=35$ <br> Explore that the ones digit does not change |  | $\begin{aligned} & 27+10=37 \\ & 27+20=47 \\ & 27+\square=57 \end{aligned}$ |
| Add two 2－digit numbers | (A) <br> Model using dienes，place value counters and numicon |  <br> Use number line and bridge ten using part whole if necessary． |  $\begin{gathered} 20+40=60 \\ 5+7=12 \\ 60+12=72 \end{gathered}$ |
| Add three 1－digit numbers |  <br> Combine to make 10 first if possible，or bridge 10 then add third digit | $b^{+}+\operatorname{rif}^{\infty}+\cos ^{8}$ <br> Regroup and draw representation． | $\begin{aligned} \frac{4+7+6}{10} & =10+7 \\ & =17 \end{aligned}$ <br> Combine the two numbers that make／ bridge ten then add on the third． |

## CPA approach to: Subtraction

| Objective \& Strategy | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Regroup a ten into ten ones | Use a PV chart to show how to change a ten into ten ones, use the term 'take and make' | $\begin{aligned} & 333 \\ & 20-4= \end{aligned}$ | $20-4=16$ |
| Partitioning to subtract without regrouping. <br> 'Friendly numbers' | $34-13=21$ <br> Use Dienes to show how to partition the number when subtracting without regrouping. | Children draw representations of Dienes and cross off. $43-21=22$ | $43-21=22$ |
| Make ten strategy <br> Progression should be crossing one ten, crossing more than one ten, crossing the hundreds. | Use a bead bar or bead strings to model counting to next ten and the rest. | Use a number line to count on to next ten and then the rest. | $93-76=17$ |

## CPA approach to: Division

| Objective \& Strategy | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Division as sharing | I have 10 cubes, can you share them equally in 2 groups? | Children use pictures or shapes to share quantities. <br> Children use bar modelling to show and support understanding. <br> $12 \div 4=3$ | $12 \div 3=4$ |
| Division as grouping | Divide quantities into equal groups. <br> Use cubes, counters, objects or place value counters to aid understanding. | Use number lines for grouping $12 \div 3=4$ <br> Think of tne dar as a wnoie. split it into the number of groups you are dividing by and work out how many would be within each group. $20$ $\square$ $\begin{aligned} & 20 \div 5=? \\ & 5 \times ?=20 \end{aligned}$ | $28 \div 7=4$ <br> Divide 28 into 7 groups. How many are in each group? |

## CPA approach to: Multiplication

|  <br> Strategy | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: |
| Doubling | Model doubling using dienes and PV counters. | Draw pictures and representations to show how to double numbers | Partition a number and then double each part before recombining it back together. |
| Counting in multiples of $2,3,4,5,10$ from 0 <br> (repeated addition) | Count the groups as children are skip counting, children may use their fingers as they are skip counting. Use bar models. $5+5+5+5+5+5+5+5=40$ | Number lines, counting sticks and bar models should be used to show representation of counting in multiples. | Count in multiples of a number aloud. <br> Write sequences with multiples of numbers. $\begin{aligned} & 0,2,4,6,8,10 \\ & 0,3,6,9,12,15 \\ & 0,5,10,15,20,25,30 \end{aligned}$ $4 \times 3=\square$ |
| Multiplication is commutative | Create arrays using counters and cubes and <br> Numicon. <br> Pupils should understand that an array can represent different equations and that, as multiplication is commutative, the order of the multiplication does not affect the answer. | Use representations of arrays to show different calculations and explore commutativity. <br> 0000 <br> 0000 | $\begin{aligned} & 12=3 \times 4 \\ & 12=4 \times 3 \end{aligned}$ <br> Use an array to write multiplication sentences and reinforce repeated addition. $\left\lvert\, \begin{aligned} & 5+5+5=15 \\ & 3+3+3+3+3=15 \\ & 5 \times 3=15 \\ & 3 \times 5=15 \end{aligned}\right.$ |
| Using the Inverse This should be taught alongside division, so pupils learn how they work alongside each other. |  |  | $\begin{aligned} & 2 \times 4=8 \\ & 4 \times 2=8 \\ & 8 \div 2=4 \\ & 8 \div 4=2 \\ & 8=2 \times 4 \\ & 8=4 \times 2 \\ & 2=8 \div 4 \\ & 4=8 \div 2 \end{aligned}$ <br> Show all 8 related fact family sentences. |
