## Order for learning the times tables

Step 1

Fire just  $1 \times 6$ ,  $2 \times 6$ ,  $5 \times 6$ ,  $10 \times 6$  at them first.

This will build up on their most secure existing table facts

Step 2

Add in  $3 \times 6$ ,  $4 \times 6$  when step 1 is frequently recalled correctly and instantly

Step 3

Build up with  $6 \times 6$ ,  $7 \times 6$ ,  $8 \times 6$

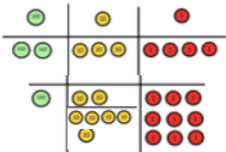

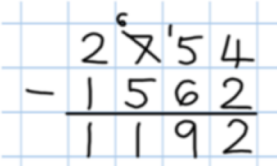

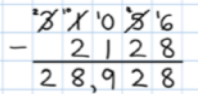

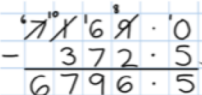

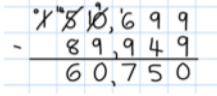

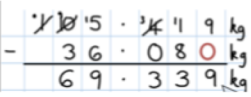

Step 4

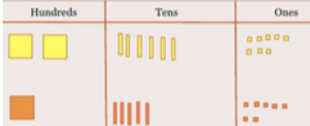

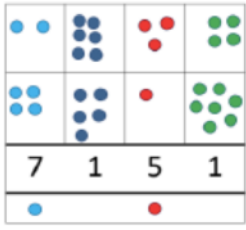

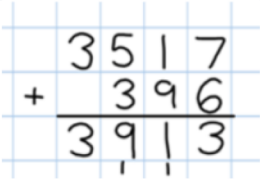

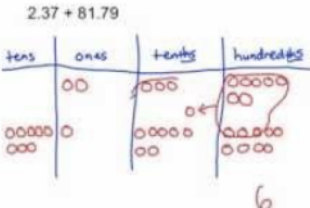

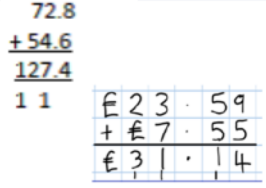

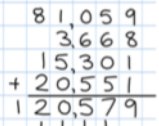

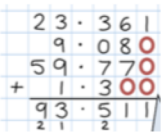

When looking at  $9 \times 6$ ,  $11 \times 6$  and  $12 \times 6$ , children should look at finding  $10 \times 6$  and adjust

**When they're ready, practice quick recall and related facts.**

# CPA approach to: Subtraction

Objective & Strategy	Concrete	Pictorial	Abstract
Subtracting tens and ones  Year 4 subtract with up to 4 digits.  <i>Introduce decimal subtraction through context of money</i>	<p>234 - 179</p>  <p>Model process of exchange using Numicon, base ten and then move to PV counters.</p>	Children to draw pv counters and show their exchange—see Y3	 <p>Use the phrase 'take and make' for exchange</p>
Year 5- Subtract with at least 4 digits, including money and measures.  <i>Subtract with decimal values, including mixtures of integers and decimals and aligning the decimal</i>	As Year 4	Children to draw pv counters and show their exchange—see Y3	 <p>Use zeros for place holders.</p> 
Year 6—Subtract with increasingly large and more complex numbers and decimal values.			 

# CPA approach to: Addition

Objective & Strategy	Concrete	Pictorial	Abstract
Y4—add numbers with up to 4 digits	<p>Children continue to use dienes or pv counters to add, exchanging ten ones for a ten and ten tens for a hundred and ten hundreds for a thousand.</p> 	 <p>Draw representations using pv grid.</p>	 <p>Continue from previous work to carry hundreds as well as tens.  Relate to money and measures.</p>
Y5—add numbers with more than 4 digits.  Add decimals with 2 decimal places, including money.	<p>As year 4</p>  <p>Introduce decimal place value counters and model exchange for addition.</p>	 <p>2.37 + 81.79</p>	 <p>£23.59 + £7.55 £31.14</p>
Y6—add several numbers of increasing complexity  Including adding money, measure and decimals with different numbers of decimal points.	As Y5	As Y5	 <p>Insert zeros for place holders.</p> 

# CPA approach to: Multiplication

Objective & Strategy	Concrete	Pictorial	Abstract																																																						
Column Multiplication for 3 and 4 digits x 1 digit.	<div><table><tr><th>Hundreds</th><th>Tens</th><th>Ones</th></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr><tr><td></td><td></td><td></td></tr></table><p>It is important at this stage that they always multiply the ones first.</p><p>Children can continue to be supported by place value counters at the stage of multiplication. This initially done where there is no regrouping. <math>321 \times 2 = 642</math></p></div>	Hundreds	Tens	Ones													<div><table><tr><td>x</td><td>300</td><td>20</td><td>7</td></tr><tr><td>4</td><td>1200</td><td>80</td><td>28</td></tr></table></div>	x	300	20	7	4	1200	80	28	<div><math display="block">\begin{array}{r} 327 \\ \times 4 \\ \hline 1208 \end{array}</math> <table><tr><td></td><td>3</td><td>2</td><td>7</td></tr><tr><td>x</td><td></td><td></td><td>4</td></tr><tr><td></td><td>1</td><td>3</td><td>0</td><td>8</td></tr><tr><td></td><td></td><td>1</td><td>2</td><td></td></tr></table><p>This will lead to a compact method.</p></div>		3	2	7	x			4		1	3	0	8			1	2

# CPA approach to: Division

Objective & Strategy	Concrete	Pictorial	Abstract				
Divide at least 3 digit numbers by 1 digit.  Short Division	<p><math>96 \div 3</math></p> <table><thead><tr><th>Tens</th><th>Units</th></tr></thead><tbody><tr><td>3</td><td>2</td></tr></tbody></table> <p>Use place value counters to divide using the bus stop method alongside</p> <p><math>42 \div 3 =</math></p> <p>Start with the biggest place value, we are sharing 40 into three groups. We can put 1 ten in each group and we have 1 ten left over.</p> <p>We exchange this ten for ten ones and then share the ones equally among the groups.</p> <p>We look how much in 1 group so the answer is 14.</p>	Tens	Units	3	2	<p>Students can continue to use drawn diagrams with dots or circles to help them divide numbers into equal groups.</p> <p>Encourage them to move towards counting in multiples to divide more efficiently.</p>	<p>Begin with divisions that divide equally with no remainder.</p> $\begin{array}{r} 218 \\ 3 \overline{) 654} \end{array}$ <p>Move onto divisions with a remainder.</p> $\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \end{array}$ <p>Finally move into decimal places to divide the total accurately.</p> $\begin{array}{r} 14.6 \\ 35 \overline{) 511.0} \end{array}$
Tens	Units						
3	2						

## Long Division

Step 1—a remainder in the ones

$$\begin{array}{r} \text{h t o} \\ 041 \text{ R } 1 \\ 4 \overline{) 165} \end{array}$$

- 4 does not go into 1 (hundred). So combine the 1 hundred with the 6 tens (160).
- 4 goes into 16 four times.
- 4 goes into 5 once, leaving a remainder of 1.

$$\begin{array}{r} \text{th h t o} \\ 0400 \text{ R } 7 \\ 8 \overline{) 3207} \end{array}$$

- 8 does not go into 3 of the thousands. So combine the 3 thousands with the 2 hundreds (3,200).
- 8 goes into 32 four times ( $3,200 \div 8 = 400$ )
- 8 goes into 0 zero times (tens).
- 8 goes into 7 zero times, and leaves a remainder of 7.

# CPA approach to: Division

## Long Division

Step 1 continued...

$$\begin{array}{r} \text{h t o} \\ 061 \\ 4 \overline{) 247} \\ \underline{-4} \\ 3 \end{array}$$

When dividing the ones, 4 goes into 7 one time. Multiply  $1 \times 4 = 4$ , write that four under the 7, and subtract. This finds us the remainder of 3.

Check:  $4 \times 61 + 3 = 247$

$$\begin{array}{r} \text{th h t o} \\ 0402 \\ 4 \overline{) 1609} \\ \underline{-8} \\ 1 \end{array}$$

When dividing the ones, 4 goes into 9 two times. Multiply  $2 \times 4 = 8$ , write that eight under the 9, and subtract. This finds us the remainder of 1.

Check:  $4 \times 402 + 1 = 1,609$

## Long Division

Step 2—a remainder in the tens

1. Divide.	2. Multiply & subtract.	3. Drop down the next digit.
$\begin{array}{r} \text{t o} \\ 2 \\ 2 \overline{) 58} \end{array}$ <p>Two goes into 5 two times, or 5 tens <math>\div 2 = 2</math> whole tens -- but there is a remainder!</p>	$\begin{array}{r} \text{t o} \\ 2 \\ 2 \overline{) 58} \\ \underline{-4} \\ 1 \end{array}$ <p>To find it, multiply <math>2 \times 2 = 4</math>, write that 4 under the five, and subtract to find the remainder of 1 ten.</p>	$\begin{array}{r} \text{t o} \\ 29 \\ 2 \overline{) 58} \\ \underline{-4} \downarrow \\ 18 \end{array}$ <p>Next, drop down the 8 of the ones next to the leftover 1 ten. You combine the remainder ten with 8 ones, and get 18.</p>

1. Divide.	2. Multiply & subtract.	3. Drop down the next digit.
$\begin{array}{r} \text{t o} \\ 29 \\ 2 \overline{) 58} \\ \underline{-4} \\ 18 \end{array}$ <p>Divide 2 into 18. Place 9 into the quotient.</p>	$\begin{array}{r} \text{t o} \\ 29 \\ 2 \overline{) 58} \\ \underline{-4} \\ 18 \\ \underline{-18} \\ 0 \end{array}$ <p>Multiply <math>9 \times 2 = 18</math>, write that 18 under the 18, and subtract.</p>	$\begin{array}{r} \text{t o} \\ 29 \\ 2 \overline{) 58} \\ \underline{-4} \\ 18 \\ \underline{-18} \\ 0 \end{array}$ <p>The division is over since there are no more digits in the dividend. The quotient is 29.</p>

# CPA approach to: Division

## Long Division

Step 2—a remainder in any of the place values

1. Divide.	2. Multiply & subtract.	3. Drop down the next digit.
<div><div>h t o</div><div>1</div><div>2 ) 2 7 8</div></div> <p>Two goes into 2 one time, or 2 hundreds ÷ 2 = 1 hundred.</p>	<div><div>h t o</div><div>1</div><div>2 ) 2 7 8</div><div>- 2</div><div>0</div></div> <p>Multiply <math>1 \times 2 = 2</math>, write that 2 under the two, and subtract to find the remainder of zero.</p>	<div><div>h t o</div><div>1 8</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div></div> <p>Next, drop down the 7 of the tens next to the zero.</p>
Divide.	Multiply & subtract.	Drop down the next digit.
<div><div>h t o</div><div>1 3</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div></div> <p>Divide 2 into 7. Place 3 into the quotient.</p>	<div><div>h t o</div><div>1 3</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div><div>- 6</div><div>1</div></div> <p>Multiply <math>3 \times 2 = 6</math>, write that 6 under the 7, and subtract to find the remainder of 1 ten.</p>	<div><div>h t o</div><div>1 3</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div><div>- 6</div><div>1 8</div></div> <p>Next, drop down the 8 of the ones next to the 1 leftover ten.</p>
1. Divide.	2. Multiply & subtract.	3. Drop down the next digit.
<div><div>h t o</div><div>1 3 9</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div><div>- 6</div><div>1 8</div></div> <p>Divide 2 into 18. Place 9 into the quotient.</p>	<div><div>h t o</div><div>1 3 9</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div><div>- 6</div><div>1 8</div><div>- 1 8</div><div>0</div></div> <p>Multiply <math>9 \times 2 = 18</math>, write that 18 under the 18, and subtract to find the remainder of zero.</p>	<div><div>h t o</div><div>1 3 9</div><div>2 ) 2 7 8</div><div>- 2</div><div>0 7</div><div>- 6</div><div>1 8</div><div>- 1 8</div><div>0</div></div> <p>There are no more digits to drop down. The quotient is 139.</p>
